Scoring: The GEQ measures these four elements regarding how attractive a group is to its individual members: (1) attraction to group—task, (2) attraction to group—social; (3) group integration—task, and (4) group integration—social. To determine your score, simply add the numbers you circled for the questions in brackets below:

- Individual Attractions to Group—Task [item 2 + item 4 + item 6 + item 8 = __]  
- Individual Attractions to Group—Social [item 1 + item 3 + item 5 + item 7 + item 9 = __]  
- Group Integration—Task [item 10 + item 12 + item 14 + item 16 + item 18 = __]  
- Group Integration—Social [item 11 + item 13 + item 15 + item 17 = __]

The higher your score on each subscale, the greater you reflect that dimension (e.g., a score of 31 on the Individual Attraction—Social scale means you are more socially attracted to the group than a score of 15 would indicate). Note that the individual attraction scales range from a low of 4 to a high of 48; whereas the group integration scales range from a low of 5 to a high of 45.

GEQ Scoring Instructions

The GEQ measures four elements regarding how attractive a group is to its individual members:

Items 1, 2, 3, 4, 6, 7, 8, 11, 13, 14, 17, and 18 should be REVERSE scored, which means that a 1 would equal 9, and a 9 would equal 1. After reversing the necessary items simply add the numbers as described below.

1) Attraction to group - task (AT-G) = score of items 2+4+6+8;

2) Attraction to group - social (AT-S) = score of items 1+3+5+7+9;

3) Group Integration-Task (GI-T) = score of items 10+12+14+16+18;

4) Group Integration-Social (GI-S) = score of items 11+13+15+17.

The Individual attraction scale scores range from a low of 4 to a high of 36, whereas the group integration scale scores range from a low of 5 to a high of 45.
